

FeasiBuild

Build to Sell? Five Ways to Do It Right.

Positioning isn't a marketing word in a feasibility study – it's a price quartile. And it changes every number downstream. FeasiBuild's Sale Stream turns that insight into a structured underwriting engine.

Made with GAMMA

Five Building Types. Five Logics.

Each type carries its own cost structure, title framework, and revenue logic.

Residential Landed

Terrace, semi-D, bungalow – infrastructure costs included

Residential High-Rise

Condo, apartment, serviced – strata titles, mixed-use retail

Commercial Landed

Terrace shop-offices

Commercial Strata Office

G+4+ towers, unit-by-unit sales

Commercial Strata Warehouse

Bulk, last-mile, multi-storey, cold storage

Positioning Is a Price Quartile — Not a Vibe

In FeasiBuild, you don't vaguely pick "mid-market." You commit to a band – and every downstream number follows.

Affordable

Bottom **25%** of market prices

Mid-Market

Market average $\pm 10\%$

Upper-Mid

Top **25%** of market prices

Luxury

Top **10%** of market prices

FINISHING STANDARD

Every Finish Level Has a Cost Benchmark

From bare structure to move-in ready – each tier recalibrates construction costs and revenue projections automatically.

01

Core & Shell

Structural frame only

02

Standard

Basic fit-out, functional

03

Premium

High-spec materials and finishes

04

Fully Furnished

Turnkey, ready to occupy

WAREHOUSE EXCEPTION

Warehouses Don't Follow the Finishing Ladder

For Commercial Strata Warehouses, finishing standard is replaced by two more relevant dimensions: **sub-type** and **grade**. The engine adapts – because a cold storage facility and a bulk warehouse are fundamentally different products.

Sub-Type

Bulk · Last-Mile · Multi-Storey · Cold Storage

Grade

Grade A · Grade B

That's the Difference Between a Spreadsheet and an Engine.

Every choice – building type, positioning band, finishing standard – **recalibrates your construction cost benchmarks and revenue stack automatically**. No manual linking. No broken formulas. Just a live, coherent feasibility model.

Manual Spreadsheet

Static assumptions, disconnected inputs, fragile formulas

FeasiBuild Engine

Dynamic recalibration, linked benchmarks, live outputs

Ready to Underwrite Smarter?

FeasiBuild's Sale Stream gives developers, feasibility analysts, and proptech teams a structured, automated path from positioning to pro forma – built for markets like Dubai and beyond.
