

FeasiBuild

How to Evaluate a Real Estate Deal in 30 Minutes vs. 3 Weeks

The difference between old-school consulting and AI-powered analysis – and why it changes everything for developers, analysts, and decision-makers.

The Problem

FeasiBuild

Traditional Feasibility Studies Are Broken

Real estate developers have long relied on weeks-long consulting engagements to evaluate a single deal. The process is slow, expensive, and entirely dependent on outside expertise. By the time the report lands, the market has moved – and so has the opportunity.

Too Slow

3-week turnaround while competitors act in hours

Too Expensive

Consulting fees price out mid-market developers

Too Rigid

Static reports can't adapt to changing assumptions

The Traditional Method: 3 Weeks

The old-school consulting workflow stretches across three full weeks, consuming resources at every step. Here's how the timeline typically unfolds – and where it breaks down.

⚠ Result: Expensive, static, and entirely consultant-dependent – with zero flexibility once the report is delivered.

The Hidden Cost

FeasiBuild

What You're Really Paying For

Traditional feasibility studies aren't just slow – they're structurally expensive. Developer fees, analyst hours, and revision cycles compound quickly. Most institutional-grade studies cost between **\$15,000 and \$50,000** per engagement, putting comprehensive analysis out of reach for smaller projects and faster-moving opportunities.

Consultant Dependency

Every question, assumption change, or scenario requires going back to an external firm – adding days and dollars to each iteration.

Static Deliverables

Once the PDF is delivered, the model is frozen. Market shifts, rate changes, or new comps require a brand-new engagement.

The AI-Powered Method: 30 Minutes

FeasiBuild compresses the entire feasibility workflow into a single, streamlined session. No consultants. No waiting. Institutional-grade output in the time it takes to have a coffee.

1**Min 1–10**

User inputs project parameters. AI instantly generates comprehensive market research, pulling live comps, demand signals, and demographic context.

2**Min 10–20**

Automated financial modeling kicks in – pro forma projections, IRR, cash-on-cash returns, and sensitivity analysis built dynamically.

3**Min 20–30**

AI writes polished, professional market narratives ready for stakeholders, lenders, and investment committees.

✓ Result: Affordable, dynamic, and fully self-service – with live scenario modeling at your fingertips.

Side-by-Side: Old Way vs. New Way

FeasiBuild

The contrast between traditional consulting and AI-powered feasibility analysis isn't incremental – it's transformational. Here's how every dimension stacks up.

Dimension	Traditional Method	FeasiBuild (AI)
Timeline	21-30 days	30 minutes
Cost	\$15,000-\$50,000	Fraction of the cost
Flexibility	Static PDF deliverable	Dynamic, editable model
Dependency	External consultant required	Fully self-service
Output Quality	Institutional grade	Institutional grade

The Headline Numbers

FeasiBuild

Same quality.
99% faster.
90% cheaper.

FeasiBuild doesn't sacrifice rigor for speed. It delivers the same institutional-grade analysis that lenders and investment committees expect – just without the wait, the invoices, or the middlemen.

Made with **GAMMA**

Institutional-Grade Output, Automatically Generated

Every FeasiBuild report covers the full spectrum of analysis that a professional feasibility study demands – structured to meet lender, partner, and investment committee standards.

Market Research

Live competitive supply, absorption rates, demographic demand drivers, and submarket positioning – synthesized automatically.

Financial Modeling

Pro forma projections, IRR, equity multiples, debt coverage ratios, and sensitivity tables – built dynamically from your inputs.

Market Narratives

Polished, professional written analysis ready for investment memos, lender packages, and stakeholder presentations.

Scenario Analysis

Instantly model bear, base, and bull cases – adjust assumptions in real time without rebuilding from scratch.

Who It's Built For

FeasiBuild

Designed for Every Decision-Maker in the Deal Stack

Real Estate Developers

Evaluate more deals in less time. Run preliminary feasibility before committing to due diligence – and move faster than competing buyers.

Investment Analysts

Replace manual Excel builds with dynamic AI models. Spend your time on strategy and interpretation, not data assembly and formula-checking.

Capital & Decision-Makers

Get the full picture faster. FeasiBuild's structured outputs are designed to meet the expectations of investment committees, LPs, and lenders.

Ready to Modernize?

FeasiBuild

FeasiBuild Delivers in 30 Minutes — Not Weeks

The real estate industry moves fast. Your feasibility analysis should too. FeasiBuild gives developers, analysts, and capital allocators the institutional-grade analysis they need – at the speed and cost that today's market demands.
